

The Four Things I Chose Were:

- Image Gallery
- 2 Canvas Tags (Logo Using Drawstrip and Pie Chart using chart.js)
- Video Tag
- Data Visualization (bar graph via Google blue bar graph)

JQuery

- .hide() to hide media and what we do section
- .fadetoggle() on the gallery button to show media section once button is clicked
- .slideToggle() on the what we do section to show info once button is clicked

The design for Heat Check is just a simple one page layout mainly because in the end it should be an ecommerce site so I wanted it to be more of a blog/start up site that just tells you the basics of what Heat Check does. The two buttons on the lower right side hold the image gallery, Video, data visualization and the pie chart

For user to see the media or the charts they must click the button. I put these there so that the user has to stay on the page and doesn't navigate away that way (to me) they end up reading the info listed above and the info inside the sections.

The Images In The Image Gallery Are From My Personal Collection

Images in the Slider At The Top Of The Page (coin slider js) are from flicker

I typed in sneaker event in the search box went to advanced settings clicked only search creative commons, Find content to use commercially find content to modify, adapt, or build upon and grabbed a few images.

The poster image on the video is from flicker I typed in Swag in the search box went to advanced settings clicked only search creative commons, Find content to use commercially find content to modify, adapt, or build upon and grabbed a few images

The Video Used Is Mine As Well I Recorded My Brother Talking About A Few Pairs Of Kicks form Both Collections
